

FLORA OF TURKEY: A FLORISTIC BIBLIOGRAPHY

P. H. DAVIS & J. R. EDMONDSON

ABSTRACT. This bibliography (partially annotated) contains references to floristic works having a direct bearing on the Turkish and East Aegean flora, cites papers written as precursors to the *Flora of Turkey*, and refers to other relevant works such as itinerary papers and earlier bibliographies.

INTRODUCTION

Our knowledge of the floristic literature has progressively enlarged as the Flora of Turkey project has developed. As well as the increasing amount of herbarium material seen, the extraction of floristic records provides an important source of data on the distribution of species in Turkey and the East Aegean islands, both for contributors of generic accounts in preparation and for the proposed Supplement to follow volume 8.

A duplicated sheet listing many of these sources has been distributed by the Editor of the *Flora of Turkey** to contributors. The present bibliography grew out of a succession of these lists, and has been supplemented and annotated to include works available up to December 1978 and in a few cases later. It is hoped that its publication will be helpful not only to those working on the Turkish flora, but also to other investigators of the Mediterranean and SW Asian floras. Comments, including the grid squares [e.g. A4] used in the Flora, are given in square brackets. Translations of Turkish, Greek and Russian titles are given in round brackets.

Vegetational studies, including phytosociological papers, have not been included unless they contain precise floristic information; however, a short list will be found in *Flora of Turkey* vol. 1, p. 25 (1965). Recent revisions of specific taxonomic groups in Turkey are included in the references of Davis & Hedge, 'The Flora of Turkey: past, present and future' in *Candollea* 30:331-351 (1975) and Davis, 'Turkey: present state of floristic knowledge' in *Colloques Int. du C.N.R.S.* no. 235, pp. 93-113 (1976).

In order to restrict the scope of the main list to floristic works, it was necessary to list two series of papers separately: 'Materials for a Flora of Turkey', prepared mainly at Edinburgh, and 'Novitiae Florae Anatolicae' by Dr A. Huber-Morath at Basel. Several recently published papers giving

new distribution records appeared *after* the relevant volumes of the *Flora* and provide data for the Supplement. The published volumes of the *Flora of Turkey* are therefore also listed below with their publication dates. References to works which contain distribution maps, itineraries and other bibliographies are given under the final heading 'Additional references'.

It must be emphasised that, even when the *Flora of Turkey* is to hand, it is often difficult to identify critical or incomplete material correctly without having access to a well-determined reference collection such as we have at Edinburgh. Floristic records should always be treated with a certain degree of caution, especially where they appear unlikely on distributional grounds.

We have drawn upon the knowledge of many botanists, including our colleagues at Edinburgh, during the preparation of this bibliography, and we are equally grateful to all those botanists who have sent us reprints of their work. Thanks are due to Ann Delaney for her help in extracting references, to the past and present S.R.C. assistants on the *Flora* project, whose successive researches on the literature played an important part in the development of the bibliography, and to the Science Research Council (U.K.) whose financial support has enabled the *Flora of Turkey* project to continue.
